

SoapBerries™

What Are They?

Centuries ago, the natural cleaning surfactant, Saponin, was discovered in the shells of the Sapindus family of trees and shrubs. The Sapindus Mukorossi, commonly referred to as the “soap nut tree”, thrives throughout the foothills of the Himalayas. The shell of the Mukorossi contains the highest quality natural surfactant, or soap in the world.

Harvested only when the soapberry fruit falls from the tree, the shells of the fruit are removed and dried naturally in the sun without any need for chemical processing. The Sapindus Mukorossi tree, lauded as the premier producer of quality Saponin, will yield fruit for 90 years of its life.

About the SoapBerries Packet

- Each packet contains multiple SoapBerries soap nuts
- Each packet can be used for 4 – 6 loads of laundry (large hot water loads 4 washes, small cold water loads up to 6 washes)
- It is safe to use at double strength, 2 packets for extra large or heavily soiled.

How do I use my SoapBerries?

Before adding laundry, toss 1 unopened packet of SoapBerries into the washer. Use two packets for extra large or heavily soiled loads. Rest assured that your clothes are now being cleaned naturally with Saponin – creating the smallest ecological footprint possible.

After your wash cycle is complete remove the packet and set it aside until your ready to do your next load. Reuse the packet until fruit shells open up, become squishy and begin to lose shape (good for approximately 4 – 6 loads of laundry).

Cost of SoapBerries?

\$23.50 per box (30 packets = 120 plus washes per box).
